

FOR IMMEDIATE RELEASE

PeakHour 6 Brings AI-Powered Network Insight to the Mac

The all-new release reimagines the popular network monitor with an AI advisor that explains problems in plain English, deep Wi-Fi and ISP visibility, and a dashboard that shows your whole connection at a glance.

NEW YORK, NY, [LAUNCH DATE] — InfiniteLoopback LLC today announced PeakHour 6, a major new version of its network monitoring app for macOS. Rebuilt from the ground up, PeakHour 6 turns the question "why is the internet slow?" into an answer anyone can understand — combining always-on monitoring of every hop between a Mac and the internet with an AI advisor that explains what it sees in plain language.

At the centre of PeakHour 6 is the AI Network Advisor. Instead of asking users to interpret latency graphs and packet-loss percentages, the Advisor analyzes PeakHour's live telemetry — latency spikes, Wi-Fi congestion, ISP behaviour — and answers questions like "why did my video call stutter?" in plain English, with its reasoning available for export.

PeakHour 6 also sees further than the Mac it runs on. Wi-Fi Intelligence breaks down signal strength, channel congestion, and negotiated speed in one view; Router & ISP Details surface the upstream environment most utilities ignore, from gateway health to the ISP's real-world performance. Together they pinpoint whether a problem lives on the Mac, the Wi-Fi, the router, or the provider.

A new Liquid Glass dashboard presents the entire connection as a living chain — This Mac, Wi-Fi, router, ISP, internet — with per-hop health updated in real time. It is joined by a refined menu bar with glanceable statistics, internet-down and restored alerts, speed tests with full history, and customisable Pro Card real-time charts.

"Everyone knows the feeling of the internet being mysteriously bad and having no idea who to blame. PeakHour 6 is built to end that mystery — it watches every link in the chain and, for the first time, simply tells you what happened." — Edward Lawford, founder of InfiniteLoopback

PRICING & AVAILABILITY

PeakHour 6 is available worldwide today, exclusively on the Mac App Store, as a free download with a trial. Ongoing use is \$12.99/year or a one-time \$44.95 lifetime license; existing PeakHour 4 customers upgrade for \$9.99/year or \$34.95. PeakHour 6 requires macOS 14 Sonoma or later and runs natively on Apple Silicon and Intel Macs.

ABOUT INFINITELOOPBACK

InfiniteLoopback LLC (formerly Digitician Inc.) is an independent software studio dedicated to making professional-grade network diagnostics understandable for everyone. Its flagship app, PeakHour, has helped Mac users see and understand their internet connections for over a decade. Learn more at <https://peakhour.app>.
